SAKE

About: Sake is an alcoholic beverage of Japanese origin that is made from fermented rice. In Japan, sake is the national beverage and is usually served with great ceremonial practices. The production of sake occurs by the act of polishing rice and there are over 80 different kinds of rice specifically used for sake. The more polished a grain of rice becomes, the more defined and desirable the sake. The process in which sake is made most resembles brewing, like that of beer and like most brewed beverages, sake tends to benefit from a period of storage usually ranging from nine to twelve months.
